

UPDATE ON MOUNT AGUNG 19 MAY 2018

Dear Guests,

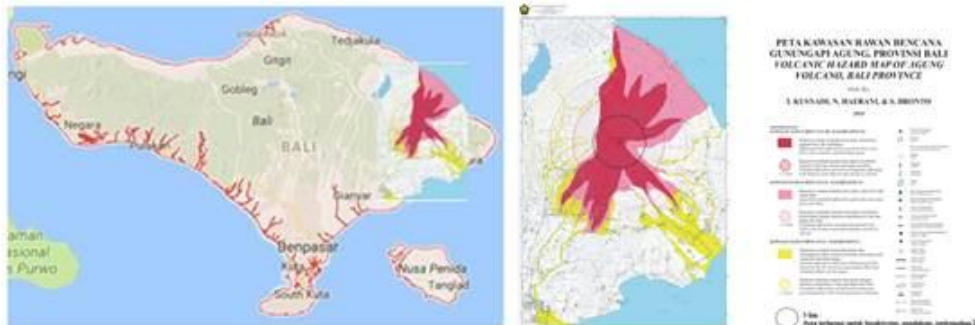

The volcanic activity of Mt. Agung is still unstable and still has the potential to erupt but on a low scale. In its status at level III (standby) has erupted again, Saturday (19/5/2018) at 17.19 WITA. The Crater smoke is in medium pressure and observed white and gray with medium intensity and height of ash column reaches 1000 meters above the peak. The eruption was lasting 240 seconds. An aviation notice (VONA) was issued showing wind direction Southeast, away from Gaia-Oasis and with no impact on commercial flights.

The danger zone remains around the crater and within 4 km of the crater, far from Gaia. Please see map below.

Bali Airport remains open and is functioning normally. Gaia-Oasis is monitoring flight alerts and ash reports daily. We have prepared a detailed options guide and we offer 1 night's free stay in the unlikely event that your flight is delayed due to Airport closure.

We emphasise that Gaia-Oasis is not in the path of the volcano;
We are in a Safe Evacuation Zone housing many refugees, over 30kms NW of Mt Agung.
Gaia is only at low risk of ashfall, which generally does not pose any longer-term risks for people without chronic lung conditions or severe heart disease.
We will not be subject to volcanic gases, lava flow or any life-threatening situation.

Gaia receives updates within a short period of any major event from local authorities.
We will continue to keep you updated on important changes.

We ask for your prayers that the situation of Bali will soon return to normal

Om Shanti Shanti Shanti Om
Putu and the Gaia Oasis Team
