Dear Guests,

Since Yesterday 8 July at 15:59 WITA, Mt Agung again has had a series of effusive eruptions and continuing this morning Monday, 9 July at 11:20 WITA.

Emissions of gas and ash have occurred continuously with altitudes ranging from 1500-2000 meters above the peak. The wind is bearing west (Gaia is north) with no impact on commercial flights. This eruption is recorded in the seismogram with a maximum amplitude of 24 mm and a duration of  $\pm$  2 minutes 42 seconds.

Until now, the activity status of the volcano of Mt Agung is unchanged at Level III (Standby).

The danger zone remains around the crater and within 4 km of the crater, far from Gaia. Estimated of danger zone are dynamic and continuously evaluated and can be changed at any time following the most recent / latest of Mt. Agung observation data.

Guests are reminded **not to go within the 4 km danger zone**, as eruption and ash emission may continue and eruptions may happen at any time.
