

UPDATE ON MOUNT AGUNG 21 APRIL 2019

Dear Guests,

Mt. Agung has erupted again on April 21, 2019 at 18:56 WITA after it has been erupted early morning today at 03.21 WITA. The last eruption occur ash column height observed $\pm 3,000$ m above the peak ($\pm 6,142$ m above sea level). The ash column was observed to be gray with thick intensity leaning to the west. This eruption is recorded on a seismogram with a maximum amplitude of 25 mm and a duration of ± 1 minutes 22 seconds.

Incandescent of lava reaches 2500-3000 in all directions.

Bali Airport remains open and is functioning normally. Gaia-Oasis is monitoring flight alerts and ash reports daily. We have prepared a detailed options guide and we offer 1 night's free stay in the unlikely event that your flight is delayed due to Airport closure.

Until now, the activity status of the volcano of Mt Agung is unchanged, still in Level III (Standby). The danger zone remains around the crater and within 4 km of the crater, far from Gaia. Estimated of danger zone are dynamic and continuously evaluated and can be changed at any time following the most recent / latest of Mt. Agung observation data.

Guests are reminded **not to go within the 4 km danger zone**, as eruption and ash emission may continue and eruptions may happen at any time.

Please see map below.

We emphasise that Gaia-Oasis is not in the path of the volcano;

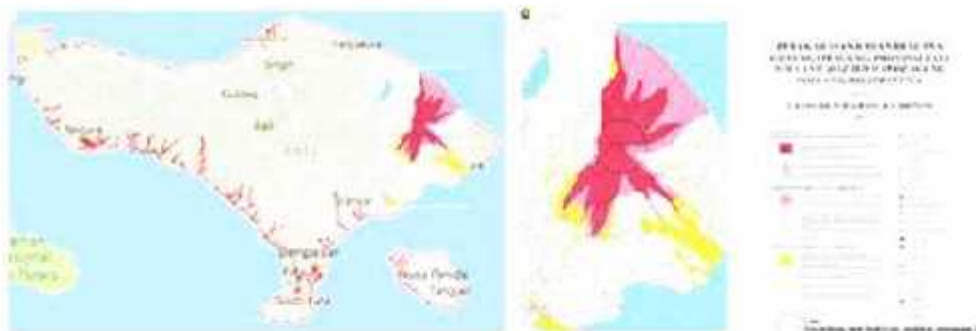

We are in a Safe Evacuation Zone over 30kms NW of Mt Agung.

Gaia is only at low risk of ashfall, which generally does not pose any longer-term risks for people without chronic lung conditions or severe heart disease.

We will not be subject to volcanic gases, lava flow or any life-threatening situation.

Gaia receives updates within a short period of any major event from local authorities.

We will continue to keep you updated on important changes.

We ask for your prayers that the situation of Bali will soon return to normal

Om Shanti ShantiShanti Om
Putu and the Gaia Oasis Team
