

UPDATE ON MOUNT AGUNG 24 MAY 2019

Dear Guests,

PVMBG issued a volcanic eruption notice (VEN) last night for Mt. Agung. The Eruption occurred at 19:23 WITA and measured amplitude 30 mm with duration \pm 4 minutes 30 seconds on the seismogram. It threw glowing lava and rocks 2.5-3 km outside the crater.

The Darwin VAAC reports some airborne ash moving southwest. Windy.com shows winds on the surface are heading generally to the southwest at 3000 meters up through 5500 meters they are blowing generally to the west-southwest.

There are no reports of evacuees. Bali Airport remains open and is functioning normally.

Gaia-Oasis is monitoring flight alerts and ash reports daily.

We have prepared a detailed options guide and we offer 1 night's free stay in the unlikely event that your flight is delayed due to Airport closure.

Until now, the activity status of the volcano of Mt Agung is unchanged, still in Level III (Standby). The danger zone remains around the crater and within 4 km of the crater, far from Gaia. Estimated of danger zone are dynamic and continuously evaluated and can be changed at any time following the most recent / latest of Mt. Agung observation data.

Guests are reminded **not to go within the 4 km danger zone**, as eruption and ash emission may continue and eruptions may happen at any time.

Please see map below.

We emphasise that Gaia-Oasis is not in the path of the volcano;

We are in a Safe Evacuation Zone over 30kms NW of Mt Agung.

Gaia is only at low risk of ashfall, which generally does not pose any longer-term risks for people without chronic lung conditions or severe heart disease.

We will not be subject to volcanic gases, lava flow or any life-threatening situation.

Gaia receives updates within a short period of any major event from local authorities.

We will continue to keep you updated on important changes.

We ask for your prayers that the situation of Bali will soon return to normal

Om Shanti ShantiShanti Om
Putu and the Gaia Oasis Team
